

“S-COMPO –WATER CLARIFIER” is a specially developed Bio-product for clarification of water and waste water. It is developed by Dr. Suhas Khambe (Ph.D. Microbiology) after 05 years of R & D. The product is tested on various scale and is scientifically proved as a special product for above work.

S-COMPO-WATER CLARIFIER consists of various bio-catalytical material to engulf and increase the density of dust particles and suspended material in water and waste water. Due to increase in density it settles down immediately and clears the water.

- 1. Bioorganic flocculating compound which coagulates the suspended particles in water and waste water including organic particles, soil particles, slit and silica particles.**
- 2. It reduces phosphates.**
- 3. It acts as a decolorizing agent.**
- 4. It is deodorants and antiperspirants,**
- 5. It is biodegradable compound .**
- 6. It is completely water soluble material**
- 7. The material is non toxic and edible.**
- 8. It reduces the growth of algae in fish tank, swiping tank or water reservoir.**
- 9. Removes BOD and COD of the waste water to significant level**
- 10. Non staining Material**
- 11. Works at neutral pH and will not affect the pH of water.**
- 12. Non effective to the surface material**
- 13. Non corrosive to metal, stainless still and glass parts**
- 14. High clumping property of the suspended material**
- 15. Will not increase TDS of water**
- 16. Can be used in fish tanks with low dosages to clarify the water.**
- 17. Can be used in swimming tanks.**
- 18. The material will not cause harm to skin or even eye retina.**
